Cubic Capacity: 2,678 cuft.

Usable Space about 2100-2400 cuft.

THESE 20' OR 40' CONTAINERS ARE APPLICABLE FOR SHIPPING HOUSEHOLD/PERSONAL/COMMERCIAL GOODS OR FOR SHIPPING VEHICLES

3 Methods of Container Shipping for Shipping Household / Shipping Personal Goods :

1. Live Load - In live **load container shipping service**, we drop off the container at your door. You get 3 hours free loading time, with any additional time needed to load at £65.00 an hour. The trucker will wait until you have finished loading and securing your goods in the container. When you are finished, the container will be returned to the shipping terminal.

2. Drop Off - For drop off **container shipping service**, If applicable, we drop off the container at your door, you get 2 or 3 days (or a weekend) to load and secure your goods in the container, and when you are finished, we will pick up the full container and return it to the shipping terminal. (This method is very expensive and most haulage companies do not accept it so please check this service can be provided prior to your booking)

3. Warehouse/Terminal Loading - If applicable, you deliver your goods or vehicle or both to the closest receiving warehouse/terminal to you. Once your goods are received, they will be loaded and secured in the container and delivered to the shipping terminal.

Shipping Household / Shipping Personal Goods

You pack all small items well in any good, clean boxes and wrap big items or furniture in moving blankets or plastic. If you have everything packed and ready to go when the container is delivered to your door, and if you and 3 to 5 friends help you load and secure your goods within the container, it shouldn't take you more than 2 or 4 hours at the most to finish loading and securing your goods in the container. You can buy rope and use the hooks inside the container to secure your goods from moving and shifting during the voyage. Or you can hire local movers to load and secure your goods in the container for you. Hiring us to load and secure your goods in a 20' container will probably cost you around £300.00, and for a 40' container around £500.00 (*PLEASE NOTE* this is not the cost for shipping the container). Also, don't forget to make a packing list of what will be shipped in the container.

Shipping Household / Shipping Personal Goods with A Vehicle

You pack all small items well in any good, clean boxes and wrap big items or furniture in moving blankets or plastic. You will need a 40' container for shipping a vehicle, furniture, and boxes of household/personal goods. A 20' container is applicable when you want to ship a vehicle and some boxes of household/personal goods. Depending on the size of your vehicle, whatever you can fit, including furniture, in the container is okay, but space will be limited in a 20' container. You can also pack belongings in the vehicle itself and the trunk of the vehicle. We can also make a wooden frame around the car to give more space to load on top of the vehicle but not directly on top of the vehicle as the frame would protect the vehicle body.

There are 3 possible methods when shipping household / shipping personal goods with a vehicle -

1. If applicable, a 20' or 40' container is delivered to your door, either live load container shipping or drop off shipping method, where you load and secure everything, including the vehicle, inside the container. The container stands about 4' (feet) above the ground on a chassis. So, you will need to hire a flat bed towing truck to bring the vehicle on a level with the container, drive the vehicle inside the container, block the tyres of the vehicle, and lastly strap the vehicle down in the container so it will not move around. Of course, there can be only 1/4 tank of fuel in the vehicle and the battery must be disconnected. When you are finished, the container will be returned to the shipping terminal .
2. If applicable, a 40' container (20' container not applicable) is delivered to your door, either live load container shipping or drop off shipping method, where you load and secure your furniture and boxes of household/personal goods within the container, leaving room for your vehicle (bumper to bumper), plus a couple of extra feet. Once that is finished, the container will be picked up and brought to the closest receiving warehouse to you. You will also deliver your vehicle to this receiving warehouse. We will then load and secure your vehicle into the container with your household/personal goods - previously loaded by you, and deliver the container to the shipping terminal. Also, the gas level has to be less than 1/4 a tank of fuel.
3. If applicable, you deliver your packed and wrapped household/personal goods and vehicle to the closest receiving/loading warehouse to you. Your belongings and vehicle will be loaded and secured in the 20' or 40' container and then delivered to the shipping terminal. Also, the gas level has to be less than 1/4 a tank of fuel.
